

v2data

Datamining the archive of the V2__ lab for unstable media.

Install dependencies/prerequisites

Dependencies/prerequisites:

- Bash shell
- Git
- GNU tools
- wget

On a Debian-based system (such as Ubuntu, etc.):

```
apt install wget git
```

The Bash shell and GNU tools are installed by default.

Install

```
git clone https://github.com/maxigas/v2data
```

Usage

Enter the installation directory:

```
cd v2data
```

Make sure bash scripts are executable:

```
chmod a+x *.sh
```

To get the archives:

```
./load.sh
```

To parse the archives:

```
cd v2.nl/archive/works
```

```
../../../../parse.sh
```

To make a Git repository from the archived works:

```
../../../../parse.sh
```

Display commits of the new Git repository:

```
cd gitrepo
```

```
git log
```
